

Diocese of Allentown Science Curriculum
Grade 3 Scope and Sequence

Learning Standard	Ideas for Developing Investigations and Learning Experiences	Date Completed
Enduring Knowledge 1: <i>Use the scientific method, scientific tools, and safe lab procedures to solve problems.</i>		
Standards: <ul style="list-style-type: none"> • Make purposeful observations using the appropriate senses. • Generate questions based on observations. • Identify strategies for gathering information (expert in field, books, observations, investigations, videos) • Conduct simple investigations. • Construct simple charts from data and observations. • Share ideas through purposeful conversation. • Communicate and present findings of observations (illustrations, models, writing). • Manipulate simple tools that aid in observation and data collection. • Make accurate measurements with appropriate units for the measurement tool. <p>A. The Scientific Method is the way that scientists learn and study the world around them. The steps include:</p>	<p>ACTIVITY</p> <ul style="list-style-type: none"> • Create a science handbook including Scientific Method & Scientific Process Skills • Observe objects using the appropriate senses • Classify items • Make a chart with data • Have students and parents sign a Lab Safety Contract • Include lab safety rules in science handbook • Include scientific instruments and tools, and their uses, in science handbook <p>LAB</p> <ul style="list-style-type: none"> • The first lab should be a step by step practice using the Scientific Method of something they know (brushing teeth) • All labs should utilize the Scientific Method and Scientific Process Skills • Review safety rules at the beginning of every lab • Review instrument and tool name and use during every lab <p>INTERNET/SMART BOARD</p> <ul style="list-style-type: none"> • Video clips • WatchKnowLearn.org • Discovery Education <p>VOCABULARY</p> <ul style="list-style-type: none"> • Hypothesis: an educated guess • Procedure: the steps in an experiment • Experiment: a fair test designed to answer a question 	

Diocese of Allentown Science Curriculum
Grade 3 Scope and Sequence

<ol style="list-style-type: none">1. Observe and ask a question2. Form a hypothesis3. Identify the procedure (materials and steps)4. Follow the procedure to conduct the experiment5. Tell what was learned from the experiment (conclusion) <p>B. Scientists use Scientific Process Skills to solve problems.</p> <ol style="list-style-type: none">1. Observing2. Classifying3. Measuring<ul style="list-style-type: none">• Length (inches, centimeters)• Mass (ounces, grams)4. Communication5. Interdisciplinary Skills <p>C. Lab Safety is a set of rules that scientists practice to safely learn and study the world around them. These rules include:</p> <ol style="list-style-type: none">1. I will follow directions2. I will listen carefully3. I will keep myself and others safe	<ul style="list-style-type: none">• Observations: noting and recording information• Conclusion: the result of outcome• Observing: ability to identify properties, structures, etc. through use of all senses• Classifying: ability to group, match, compare by commonality• Measuring: ability to find quantitative differences, to estimate, to calculate, etc. (standard & metric)• Communication: ability to verbally relate experiences, information and procedures with clarity• Wafting: waving a hand over a substance to draw a scent toward the nose• Scientist: a person who asks questions and tries different ways to answer them

Learning Standard	Ideas for Developing Investigations and Learning Experiences	Date Completed
<p style="text-align: center;">Enduring Knowledge 2: <i>Matter can be defined by characteristics.</i></p>		
<p>A. Living and nonliving things are made of parts and can be described in terms of materials of which they are made and their physical properties. Some objects are composed of a single substance; others are composed of more than one substance.</p> <p>B. Pure substances have characteristic properties, such as density, solubility, boiling point, and melting point, all of which are independent of the amount of the sample.</p>	<p>ACTIVITY</p> <ul style="list-style-type: none">Sort and describe objects based on characteristics such as the materials of which they are made and their physical properties.Discuss elements, molecules, and mixturesIdentify differences by comparing and how they can be categorized based on their propertiesExplore special properties of water as compared to other substances <p>VOCABULARY</p> <ul style="list-style-type: none">Mass- the measure of the amount of matter an object hasLength- the measure of an object from end to endVolume-a measure of how much space an object takes upBuoyancy- the ability for something to float on water or air

Learning Standard	Ideas for Developing Investigations and Learning Experiences	Date Completed
<p style="text-align: center;">Enduring Knowledge 4: <i>Matter can be measured in a variety of ways.</i></p>		
<p>A. Objects and substances have properties, such as weight and volume, which can be measured using appropriate tools.</p> <p>B. Unknown substances can sometimes be identified by their properties</p> <p>C. Measure the mass and volume of gas.</p>	<p>ACTIVITY</p> <ul style="list-style-type: none">• Determine the weight and volume of common objects using appropriate tools such as graduated cylinders, rulers, balances, and scales.• Explain why the volume of cereal changed while mass remains the same.• Design an experiment to determine which cereal would be the most economical in terms of volume, cost, and mass.• Have students brainstorm to determine how to test theories• Use balloons to demonstrate the concept of volume with a gas. <p>VOCABULARY</p> <ul style="list-style-type: none">• Graduated Cylinder- scientific tool used to measure volume• Ruler- tool used to measure length• Balance- tool used to measure mass• Scale- tool used to measure weight

Learning Standard	Ideas for Developing Investigations and Learning Experiences	Date Completed
<p style="text-align: center;">Enduring Knowledge 11: <i>Light Energy has a source and travels in a direction.</i></p>		
<p>A. Light allows an object to be seen when it is reflected to a viewer's eye. Objects cannot be seen without light.</p> <p>B. Light can be reflected and absorbed.</p> <p>C. Light maintains direction of motion until it interacts with another object.</p> <p>D. Demonstrate that shadows result from light not being able to pass through an object.</p>	<p>ACTIVITY</p> <ul style="list-style-type: none">• Collect evidence that validates the principle that if there is no light, objects cannot be seen.• Investigate with flashlights as well as other light sources and describe how light rays reflect off objects.• Demonstrate how prisms can be used to show how visible light is made up of different colors combined.• Predict the path of reflected or refracted light using lasers. Investigate how telescopes use this process.• Explain what occurs when light rays are blocked (Shadows).• Model and explain current technologies used to capture solar energy for the purposes of converting to electrical energy. <p>VOCABULARY</p> <ul style="list-style-type: none">• Light- a form of energy that allows you to see objects• Shadow- dark space that forms when light is blocked• Conductor- a material that allows energy to pass• Insulator- a material that does not allow energy to pass

Learning Standard	Ideas for Developing Investigations and Learning Experiences	Date Completed
<p align="center">Enduring Knowledge 13: <i>Thermal (heat) Energy moves in a predictable flow from warmer objects to cooler objects until all the objects are at the same temperature.</i></p>		
<p>A. Discuss how thermal energy involves the movement of molecules.</p> <p>B. Heat results when substances burn, when certain materials rub against each other, and when electricity flows through wires.</p> <p>C. Metals are good conductors of heat and other materials do not conduct (insulators)</p>	<p>ACTIVITY</p> <ul style="list-style-type: none">• Experiment with food coloring in warm and cold water.• Compare the heating of different colors in sunlight.• Draw and label diagrams showing several examples that thermal energy can be transferred from one place to another.• Compare the flow of heat in metals and nonmetals.• Demonstrate friction with different materials. <p>VOCABULARY</p> <ul style="list-style-type: none">• Heat- to flow of energy from warmer objects to cooler objects• Temperature- a measure of heat• Transfer- to change or move from one object to another• Conductor- a material that allows energy to flow• Insulator- a material that slows or stops the flow of energy	

Diocese of Allentown Science Curriculum
Grade 3 Scope and Sequence

Learning Standard	Ideas for Developing Investigations and Learning Experiences	Date Completed
Enduring Knowledge 14: <i>Magnetism is a force of attraction.</i>		
<p>A. Know that magnets have two poles, north and south, and that like poles repel while opposite poles attract.</p> <p>B. Understand that magnets are attracted to objects containing iron and this understanding can be useful in everyday applications.</p>	<p>ACTIVITY</p> <ul style="list-style-type: none">Offer opportunities to explore what happens when like and opposite poles of magnets are placed near each other.Have students build a simple compass or practice with compasses and use it to detect magnetic effects, including the earth's magnetic field. <p>VOCABULARY</p> <ul style="list-style-type: none">Magnetism- a force that attracts or repels	

Diocese of Allentown Science Curriculum
